Education

Northeastern University San Jose, CA
M.S. in Information Systems — GPA: 4.0/4.0 *Jan 2025 – Dec 2027*

Experience

Evenness San Jose, CA
Full Stack Engineer Intern *Jun 2026 – Aug 2026*

- Built React UI components and vanilla JS content scripts for a health-personalized Chrome extension with WCAG 2.1+ accessible interfaces, keyboard navigation, ARIA annotations, and dark mode support
- Architected a browser-extension-to-embeddable-widget conversion for enterprise SaaS integration, implementing Shadow DOM isolation, CSP compatibility, kill switch logic, and JWT-authenticated REST API config fetch
- Wrote CI-compatible Node.js smoke tests mocking browser APIs to enable automated testing of widget initialization, kill switch behavior, and third-party module integration
- Collaborated across two product teams in Agile sprints, contributing to code reviews, technical architecture proposals, and feature delivery from design to production

Northeastern University San Jose, CA
Research Assistant | *Link* *May 2025 – Aug 2025*

- Collaborated with faculty to build a client-side data validation web app using JavaScript, HTML, and CSS
- Reduced a 1+ hour manual validation process to under 1 minute for datasets with 10,000+ rows
- Automated detection of missing values, duplicates, and statistical outliers via PapaParse and SheetJS
- Designed modular event-driven JS architecture enabling real-time validation feedback without page reloads

Northeastern University San Jose, CA
Founder & President, HuskyCode Club *Sep 2025 – Present*

- Founded and scaled a 170+ member coding club focused on DSA and technical interview preparation
- Taught online sessions on Data Structures and Algorithms with guided LeetCode problem-solving exercises
- Designed and ran 2 weekly in-person workshops for LeetCode and interview-style problem practice
- Mentored individual students on DSA concepts and LeetCode problem-solving strategies

Projects

Pawstructured | *React, FastAPI, Google Gemini API* | Link Aug 2026

- Built an AI tool at the Dogathon hackathon that turns unstructured dog rescue write-ups into structured adoption records
- Designed a FastAPI backend with two endpoints (/extract, /caption) that call the Gemini API to pull structured tags (sex, age, breed, hard requirements, personality traits) from free-text write-ups
- Built a React frontend that lets users generate a clean record and a ready-to-post social caption from the same write-up, then export everything as a CSV

PronunciAid | *JavaScript, YouGlish API, Chrome Storage API, HTML/CSS* | Link Dec 2025

- Shipped a Chrome extension for 24-language pronunciation lookup; cut lookup time from 15+ sec to under 2 sec
- Implemented popup and new-tab display modes with user-controlled settings via Chrome Storage API
- Achieved 5-star rating and press feature by Northeastern University within one week of launch
- Applied Agile iteration to ship 2 new features in week 2 based on user feedback

Technical Skills

Languages: Python, JavaScript, Java, SQL
Frontend: React.js, HTML/CSS, RESTful APIs, Responsive UI Design
Backend & Database: Node.js, FastAPI, Supabase, PostgreSQL, MySQL
Tools: Git, Pandas, NumPy, scikit-learn, LLM APIs, Agile/Scrum, Claude Code
